

# System comparison

These two pictures clearly demonstrate the difference between the technologies existing in the 'water treatment' industry. On the left is the all-encompassing patented HydroPath method. It can clearly be seen that the signal propagates throughout the entire system. The signal generated differs from the magnetic field used by other manufactures.

The picture on the right demonstrates the very local effect generated by the magnetic approach - this applies to common permanent magnets and all the electro magnetic devices. This type of product relies on the steady passage of water through the magnetic field. When the water changes pace or stops altogether, the effect is lost. During storage of water the effect will dissipate within minutes.

The HydroPath units operates 24/7 treating all of the water - all of the time.
