

Shared Savings Agreement

Agreement between Stanlin Group, Inc., A Nevada Corporation and:

_____ Hereafter "Client".

This agreement authorizes Stanlin Group Inc. Hereafter (SEG) to perform draft, combustion, and thermal efficiency tests and analyses on all furnaces, hot water heaters

and boilers located at _____ (If more than one facility please use a separate sheet of paper identifying the properties.).

If SEG determines there is an application where, by installing the SEG Technology, there is a reasonable expectation fuel consumption will be reduced, CLIENT will provide SEG with copies of their monthly fuel and water bills at CLIENT for the previous thirty-six (36) months as well as any other numbers that may effect space and hot water heating. (Larger Industrial and or Inter-State Companies that have unique logistics are quoted based on all applicable circumstances. If job falls beyond the scope of SEG's standard options A thru C listed below. A Scope of Work, Exhibit A, will be completed identifying the boilers, furnaces and hot water heaters affected to be provided for approval before installation will begin.)

With this information, SEG will establish a base line to compare with new fuel consumption numbers with the Technology installed. SEG will then issue a written report to CLIENT with an estimate of potentially achievable savings. Actual savings will be shared fifty-fifty (50/50) between CLIENT and SEG for a period of ten (10) years beginning with the first month billing after the Technology has been installed.

CLIENT will issue a check to SEG for their fifty percent (50%) savings within seven (7) business days of CLIENT receiving their fuel bill along with a copy of the CLIENT monthly billing. The calculation for the shared savings will be the amount of reduced consumption times the current unit rate divided by two (2).

At the end of this Shared Savings Agreement, CLIENT may pay one dollar per boiler and begin receiving 100% of savings.

Initial_____

CLIENT at any time may, as an option, pay SEG an amount equal to thirty-six (36) months of estimated fuel usage savings, based on the fuel rate at the time of the buyout, any time during the life of this agreement. CLIENT would then receive 100% of the savings from reduced fuel consumption ongoing.

Manufacturing and shipping of the Technology will be paid by SEG. The installation of the Technology will be paid by CLIENT by either of the following three options:

Standard Options:

(A) No risk option. Paying an amount equal to \$750.00 per boiler from the initial CLIENT share of the monthly savings. (No out-of-pocket cost to CLIENT.)

(B) A check in the amount of \$500.00 per boiler at the time of signing this agreement. (Refunded if SEG determines there is not an application.)

(C) Installation of the SEG Technology will be by licensed, certified boiler technicians. If CLIENT has qualified licensed technicians available to install the technology and tune the boiler, installation cost may be reduced or waived.

This agreement is accepted by:

Representative of: _____
